# CHÂTEAU D'ORSAN

FAMILLE DE VIGNERONS

In the heart of a preserved nature, Céline and Nicolas, passionate winegrowers, have taken over the family estate of CHATEAU D'ORSAN in the north-east of the Gard.

A wine-producing castle since the 13th century, it is its imposing 18th century façade that is represented on our labels. Our commitment to the environment and biodiversity allows us to highlight the quintessence of an exceptional terroir, to offer you a range of wines that have a soul and a signature.

## CHÂTEAU D'ORSAN AOP Côtes du Rhône Villages **CHUSCLAN**

A wine of the terroir, which has a soul and a typicity

### TERROIR AND GRAPE VARIETIES

Vineyard cultivated on sunny hillsides on clay-limestone soil. Selected parcels of GRENACHE, SYRAH and CARIGNAN, 50 years old on average. Yields are controlled.

### WINE MAKING

The grapes are sorted and picked by hand and harvested at optimum optimal maturity. The grapes are received in the winery by gravity to keep the bunches intact. The whole bunches will ferment and macerate traditionally for 10 to 15 days, allowing the expression of our terroir.

### TASTING

With a beautiful intensity of color, its dress is a deep red with purple reflections. Its nose as well as its mouth is fruity with aromas of red fruits, cherry, small black fruits, marked by a subtle floral note of violet. Then the spices appear, like cinnamon and sweet pepper with a liquorice finish and a touch of minerality. It is a round, full, smooth, well-balanced wine with silky tannins and a good length.

### FOOD PAIRING

It will accompany your meals with cold cuts, red meat, game, dishes in sauce, with cheese or with a chocolate dessert or a red fruit pastry. Ready to drink, this wine can also be kept for a few years in the bottle.

The serving temperature is around 15-17° C.

It is not uncommon at nightfall to see colonies of "pipistrelles", a species of small bats that nests under the roofs of our cellars alongside our swallows, chickadees among others.

Our little wild black bees still have their original hive in front of our wine cellars, gathering flowers in our vineyards and the surrounding nature, thus testifying the respect of our practices.
